

## Uber Beauty 'Advanced Cosmetic Procedures'

Here at Uber Beauty, we are specialists at removing all types of warts and unsightly skin blemishes. Below is a guide to the treatments we provide.

Our Advanced Cosmetic Procedures are undertaken by clinic director and surgical electrolysisist Molly Hanson-Steel, using the Sterex SX-B electrolysis machine. By using this method, we can treat conditions usually only treated by laser or surgery. Electrolysis causes no scars

Treatment times do vary and prices will reflect the time taken. Before any treatment, at your initial consultation we will give you a reflection of cost, which is estimated in 'time'.

### Advanced Cosmetic Procedure - pricing guide:

(15 mins) £50.00

(30 mins) £120.00

consultation (redeemable) £30.00

#### Spider Naevi/Thread veins...

These conditions can be caused through trauma, poor skin protection to the elements and sometimes medication. They can be very effectively reduced or removed. We can treat the legs as well as the face.

#### Milia...

Are small, white (or sometimes pale yellow) spots that usually appear around the eyes, cheeks and on the eyelids. They are not infectious and occur when dead skin becomes trapped in small pockets at the surface of the skin or mouth. Very easy to remove and instant results can usually be seen.

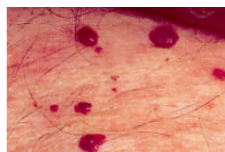

#### Plane Warts...

These are smooth warts with flat tops that mostly occur on the hands or face.

#### Seborrheic Warts...

Are not actually warts at all, but are non-cancerous growths on the outer layer of skin.

#### Campbell de Morgan (blood spots)...

Bright red spots usually a couple of millimeters across although they may grow to being half a centimeter. They are usually very bright red and look like little pockets of blood. Again very easily removed. Can occur on any part of the body.

#### Skin Tags...

A skin tag is a common, benign growth of skin that looks like a small piece of dark hanging skin. They occur in characteristic locations including the neck, underarms, eyelids, and under the breasts and places where rubbing can occur ie: bra straps, waistline, and neck. Although skin tags may vary in appearance; smooth or slightly wrinkled and irregular, flesh-colored or slightly more brown, they always hang from the skin by a small stalk and can look mushroom like in appearance.

#### Verruca...

A verruca (plantar wart) is a wart on the sole of the foot. It is the same as a common wart, but the weight of the body presses it into the foot, which can be painful. By using a small probe, emitting heat verrucas can be very effectively removed.

### Aftercare:

Immediately after your treatment the area will feel red, swollen and warm, this is quite normal. We will cool the area with Aloe Vera, which will soothe the area and start the healing process. We will provide you with all the aftercare advise you need and aloe vera to take home with you.

### For the next 48 hours:

- ≈ Do not touch, pick or rub the treated area.
- ≈ Do not use hot showers/baths
- ≈ No excessive exercise
- ≈ No alcohol
- ≈ No spicy foods

The day after, it is normal that 'pin spot' scabs may occur. This is the skin healing and a way in which the skin prevents infection from occurring. These small scabs must be left to fall off naturally and by picking, rubbing and itching will only increase damage to the skin and poor healing to the area.
